## In addition to the team, the equipment is highly significant to our work

Of course, it is also our technical equipment (in addition to the typical standards) such as various analogue and digital reflex cameras with the corresponding high-power objectives, a stereo microscope and ultrasound evaporator, which is quite comprehensive; for instance, the following are also part of our equipment:

- a professional flash installation made by the company Hensel Studiotechnik
- mid-format camera (45 x 60 mm) by Mamiya
- Slide exposure machines for the archive-ready exposure of digital images
- Gauges such as infrared thermometers, air-current gauges to record air speed, lux-meters, humidity gauges, laser distance gauges etc.
- Alarm installation with exterior-shell and interior monitoring along with alarm forwarding to a central office etc.

The stereo microscope is a standard tool in conservation.

are part of the standard equipment in our studio.

Here, you can read [more](#) on the conservation measures.

With our analogue mid-format camera, one can create images with the equivalent of approx. 56 mn pixels.

Our professional studio flash installation warrants top-quality images with consistent quality.
