

Re-smelted historic cast-glass panes

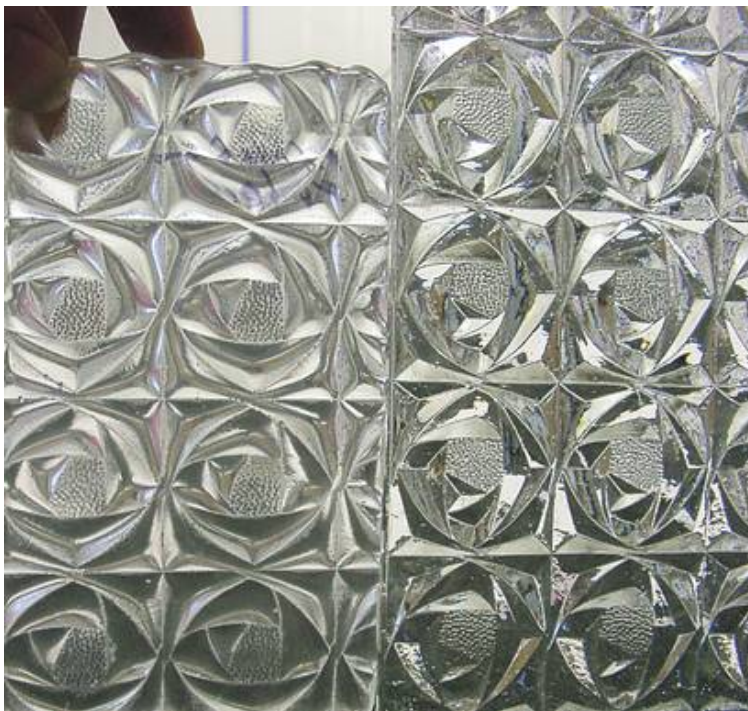

After performing extensive development work, we have successfully re-smelted historic cast glass panes up to a size of approx. 70 x 160 cm.

In this process, in principle, the re-smelting of even larger panes is conceivable.

This does not always require a template in the size of the panes to be re-smelted. This depends on many details, as do the costs involved.

Based on this technique, also individual cast panes can be manufactured by us for your planned construction project!

If necessary, please contact us to clarify the details.
